

Most Suitable for Automating Existing Manual Valves <u>PNEUMATIC VALVE ACTUATOR</u> <u>V - T o r q I</u>

Applicable valves ► ●Gate valve ●Globe valve ●Ball valve ●Butterfly valve, etc.

- Existing manual valves can easily be automated while being on the line.
- Most suitable to use as emergency shutoff valve (subject to the Fire Service Act).
- Existing manual valves can remotely be operated from the office.
- Even in a case of power failure, can be operated by securing air-supply.
- Work of automation and mounting are easy.
- By applying the mechanical torque-limiter, valves are not damaged.
- Help saving energy !
- Can easily be mounted in hazardous area (all pneumatic type).

Air switch box

$V - T o r q \Pi$

Features

- 1. An advanced, compact and lightweight valve actuator that readily mounts on an existing manual valve to retrofit it for automatic control. (Accommodates valves 2" to 40" in bore size, or larger.)
- 2. Constructed by plain gears treated with induction hardening process for virtually wear-free gear teeth, our proprietary torque limitter which serves to maintain consistent shutoff torque is a standard feature and safeguards the valve against damage by overtightening, while it ensures smooth opening and closing movement.
- 3. The air motor is of field proven vane type for quiet and smooth rotation.

4. A dedicated manual handle allows manual operation in case of emergency. (The manual handle remains locked in position to prevent movement during automatic operation, thus affording protection to the operator.)

- 5. Component parts are unitized to facillitate modification, maintenance and inspection.
- 6. With the addition of a potentiometer, a valve position indicator output is also available.

 \Rightarrow What is the torque limiter?

Our torque limiter is a mechanism designed for the purpose of closing the valve at consistent, proper torque. (Patented No. 1993887)

Using a spring-balance arrangement, it accurately detects valve's shutoff torque and, when a preset torque is reached, it stops the air motor.

The design therefore eliminates such complaints as valve overtightening or inoperative valve that has been shut off, characterized by most desirable performance for the valve with increased safety and service life.

Shutoff torque adjustment is also simple in the field.

Specifications

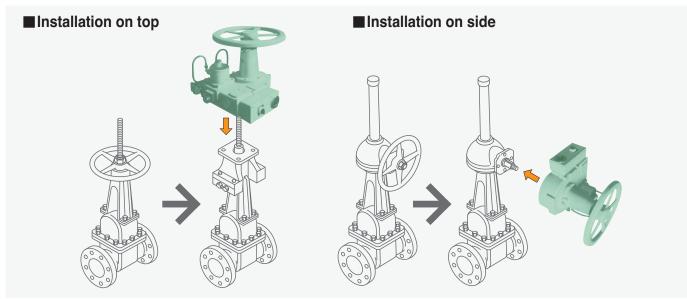

Item	Model	VTC-15 (Low torque type)	VTC-25 (High torque type)					
Shutoff torque	e N∙m	40 to 250	150 to 400					
Opening torqu	Je N∙m	400	600					
No. of Open-0	Close Revolutions rev	Set to 85 to 95% of total revolutions of target valve						
Supply air pre	essure MPa	0.40 (0.35 to 0.70)						
Air Consumpt	ion L/min (normal)	680	1100					
Connection	Drive Tubing Rc	3/8	1/2					
Dia.	Signal Tubing Rc	1/8						
Housing Mate	erial	Aluminum casting						
Finish		Munsell 7.5G7/2.5						
Operating Ter	nperature Range	-10 to +60°C						
Weight	kg	27	29					

Relationship of torque and rotational speed

Model	VTC-15 (Low	torque type)	VTC-25 (High torque type)			
Speed reduction type	A speed reduction	E speed reduction	A speed reduction	D speed reduction	E speed reduction	
Shutoff Torque [N·m]	40 to 250	40 to 100	150 to 400	60 to 100	100 to 200	
Open Torque [N·m]	400	200	600	200	400	
Rotational Speed [rpm]	23	40	23	90	40	

*The rotational speed indicated above is based on the supply air pressure of 0.4MPa supplied to the V-Torq II. Depending on the magnitude of load torque or individual product difference, the rotational speed may vary by about 10%.

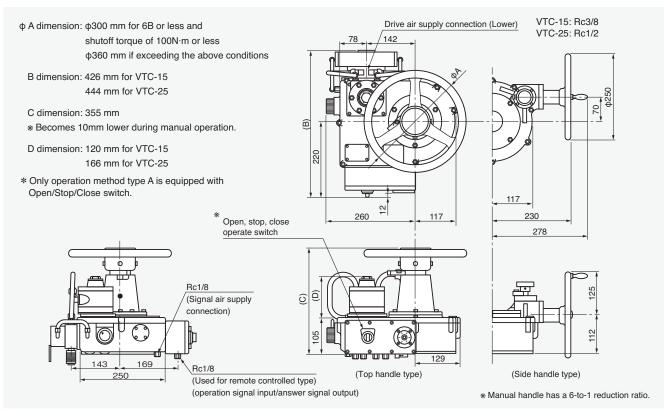

Installation Procedures

*: Most typical installation is shown here

$V - T o r q \Pi$

Outline Dimensions

Operating Principle

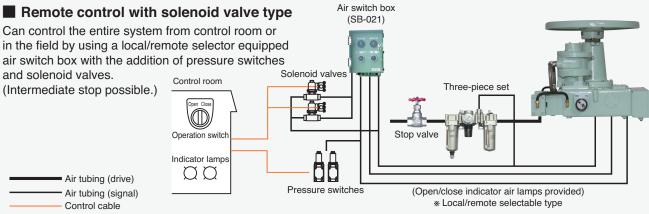

All pneumatic type

Opens and closes the valve with the air switch box located remotely from V-Torg II. (Intermediate stop possible.)

- Two tubing for operate signals Full close signal "1": Full close "0": Others Full open signal "1": Full open "0": Others (If intermediate stop is not required, single tubing suffices.)
- Two tubing for answerback signals Full close signal "1": Full close "0": Others Full open signal "1": Full open "0": Others (If specified for full close or full open only, single tubing suffices.)
- With the addition of pressure switches, full close and full open indicators can be provided in the control room.

(Intermediate stop possible.)

Air switch box (SB-031) 00 Three-piece set Stop valve (Open/close indicator lamps provided)

Product Code Explanation

Iterm	Product code															Description		
Iterini	1 2	3	- (4	(5)	6	-	78) (9)	-	10	1	-	(12)	(13)	Description		
Model	νт															Valve actuator		
Туре		С	-													V-Torq II		
1 5					For low torque (4AM)													
Air motor type							For high torque (6AM)											
						A	-									All pneumatic local type: the valve is opened/closed by the switch directly installed on body. (Intermediate stop possible)		
B –															All pneumatic remote type: the valve is opened/closed via the air switch box.			
	C –													Remote control type (fully closed or fully open during power failure) The valve is opened/closed by operation of one solenoid valve. (Status signal: Intermediate stop not possible)				
Operating method (*1) E - H - -											Remote control type (hold during power failure) The valve is opened/closed by operation of two solenoid valves. (Status signal: Intermediate stop possible)							
											Remote control type (hold during power failure) The valve is opened/closed by operation of two solenoid valves. (Pulse signal: Intermediate stop not possible)							
						Р	-									Operating method E + Valve opening signal (resistance value) output from potentiometer unit to control room		
						Ζ	-									Special

·	E -											Е	-			E reduction		
Z –									Z	-			Special					
0											0		Not req'd (The switch on V-Torq II is used for opening/closing) Operation "A"					
1														1		Close sig. only. Sig. "1": Valve close Sig. "0": Valve open Operation "B," "C"		
External operating signal													2		Open sig. only. Sig. "1": Valve open Sig. "1": Valve open Operation "B," "C"			
3														3		2 open/close input (status sig.) intermed. stop - Yes Operation "B," "E," "P"		
9														4		2 open/close input (pulse sig. * 0.3s min.) intermed. stop - No Operation "B," "H"		
														9		Special		
0															0	None		
	1														1	Full close signal only		
2															2	Full open signal only		
External output signal 3														3	Full close, full open signal			
															4	Analog output (pot. output)		
															5	Analog output (pot. output) + full close, full open signal		
	9														9	Special		

*1: In all operating methods, the answer signal (air signal) for fully open and fully closed can be output.

Electric signal when required is available via a (separately installed) pressure switch.

*2: If you have any question about analog output, contact us.

Installation Examples

☆Automated remote fire extinghishing equipment

☆Automated reaction tank-bottom valve (special installation)

☆Automated marine shipping and receiving valves

The specification as of December, 2022 is stated in this catalog. Specifications and design are subject to change without notice.
